

## CX80 ELECTRICX GREASE

**Synthetic oils based grease. Designed for lubrication of any type of machines operating at high temperatures, lightly loaded mechanically. Suitable for applications that require good electrical conductivity.**

### PROPERTIES:

- outstanding resistance to oxidation, even in the presence of copper and its alloys
- very good cohesion – the oil discharges from the lubricant in very small quantities, even at high temperatures
- effective in sub-zero temperatures

### APPLICATION:

- protection against corrosion and oxidation of the terminals, connections points of weight and welding cables
- lubricating stators
- makes dismantling any electrical contacts easier
- lubrication of the mechanical parts under voltage
- lubrication of the windshield wipers
