## Safety directional valves with spool position monitoring

On-off, direct operated, conforming to Machine Directive 2006/42/EC - certified by
S AFETY
CERTIFIED
(1) Body
(2) Spool
(3) Inductive proximity sensor FI
(4) Inductive position switch $\mathbf{F V}$
(5) Sensor electric connector (supplied with the valve)
(6) Coil electric connector (to be ordered separately)

Direct operated safety directional valves with spool position monitoring, CE marked and certified by TÜV in accordance with safety requirements of Machine Directive 2006/42/EC.
DHE, size 06, high performances, for AC and DC supply with cURus certified solenoids
DKE, size 10, for AC and DC supply with cURus certified solenoids
The valves are equipped with $\mathbf{F I}$ inductive proximity sensor or $\mathbf{F V}$ inductive position switch for the spool position monitoring, see section 17 and 11 for sensors availability and technical characteristics.

## Certification

The TÜV certificate can be downloaded from www.atos.com, catalog on line, technical information section.
Mounting surface: ISO 4401, size 06 and 10
Max flow: DHE 80 I/min
DKE $150 \mathrm{l} / \mathrm{min}$
Max pressure: $\mathbf{3 5 0}$ bar

## Notes:

FI = inductive proximity sensor, type NO (normally open) or NC (normally closed)
FV = inductive position switch providing both NO and NC contacts to be wired on the electric connector
See section 11 for sensor's characteristics

### 1.1 FI sensor \& FV switch configurations

Single solenoid valves size 06 \& 10 are provided with $n^{\circ} 1 \mathrm{FI}$ sensor or $n^{\circ} 1 \mathrm{FV}$ switch for the spool position monitoring

FI or FV

Double solenoid valves size 06 with detent are provided with $n^{\circ} 2 \mathrm{FI}$ sensors or $\mathrm{n}^{\circ} 1 \mathrm{FV}$ switch for the spool position monitoring

Double solenoid valves size 10 with detent are provided with $n^{\circ} 1 \mathrm{Fl}$ sensor or $n^{\circ} 1 \mathrm{FV}$ switch for the spool position monitoring

For model code of DHE safety valves, see section 2 For model code of DKE safety valves, see section 4

## Spool position monitor:

FI = inductive proximity switch
FV = inductive position switch (double contact)
(1) the $\mathbf{F V}$ inductive position switch provides both NC and NO contacts

3 CONFIGURATIONS AND SPOOLS (representation according to ISO 1219-1)

### 3.2 Special shaped spools for DHE

- spools type $\mathbf{0}$ and $\mathbf{3}$ are also available as $\mathbf{0 / 1}$ and $\mathbf{3 / 1}$ with restricted oil passages in central position, from user ports to tank.
- spools type 1, 4, 5 and 58 are also available as $\mathbf{1 / 1 , 4 / 8 , 5 / 1}$ and 58/1.

They are properly shaped to reduce water-hammer shocks during the swiching.

- spools type $\mathbf{1 , 1 / 2 , 3 , 8}$ are available as $\mathbf{1 P}, \mathbf{1 / 2 P}, \mathbf{3 P}, \mathbf{8 P}$ to limit valve internal leakages.
- Other types of spools can be supplied on request.
3.1 Standard spool availability for DHE - spools not listed in the table are available for all valves models

| Valve type | standard spool |  |  |  |  |  |  |

## Spool position monitor:

FI = inductive proximity switch
FV = inductive position switch (double contact)

DKE/FI and /FV are always provided with Y drain port
(1) the FV inductive position switch provides both NC and NO contacts

CONFIGURATIONS AND SPOOLS (representation according to ISO 1219-1)

### 5.1 Special shaped spools for DKE

- spools type $\mathbf{0}$ and $\mathbf{3}$ are also available as $\mathbf{0 / 1}$ and $\mathbf{3 / 1}$ with restricted oil passages in central position, from user ports to tank.
- spools type $\mathbf{1}$ is also available as $\mathbf{1 / 1}$, properly shaped to reduce the water-hammer shocks during the switching.
- spool type $1 / 9$ has closed center in rest position but it avoids the pressurization of $A$ and $B$ ports due to the internal leakages.
- other types of spools can be supplied on request.

## 8 OPTIONS

$\mathbf{A}=$ Single solenoid valves: solenoid mounted at side of port B. In standard versions the solenoid is mounted at side of port A. Double solenoid valves $\operatorname{DHE} / F V(D C), D K E / F V(D C)$ : FV inductive position switch mounted at side of port $A$. In standard versions the position switch is mounted at side of port B.

WARNING: the manual operation is not permitted for safety valves, than the valve is provided with solenoid blind rings to prevent the access to the manual override. The manual override protected by rubber cup (option /WP) is not available

WARNING: the inobservance of following prescriptions invalidates the certification and may represent a risk for personnel injury Safety valves must be installed and commissioned only by qualified personnel
Safety valves must not be disassembled
The inductive proximity FI or the inductive position switch FV can be adjusted only by the valve's manufacturer or Ats authorized service centers
Valve's components cannot be interchanged
The valves must operate without switching shocks and spool vibrations

## STATUS OF OUTPUT SIGNAL

13.1 Signal status for FI versions

Diagrams show the behaviour of the output signal for inductive switches type FI/NO
For inductive switches type $\mathbf{F I} / \mathbf{N C}$ the behaviour is opposite (high level signal instead of low level signal and viceversa)

### 13.2 Signal status for FV versions

Note: FV position switch can be electrically wired by the customer as NO or NC and then the status of the output signal will be in accordance to the selected configuration

15 OPERATING LIMITS based on mineral oil ISO VG 46 at $50^{\circ} \mathrm{C}$
The diagrams have been obtained with warm solenoids and power supply at lowest value ( $\mathrm{V}_{\text {nom }}-10 \%$ ). The curves refer to application with symmetrical flow through the valve (i.e. $\mathrm{P} \rightarrow \mathrm{A}$ and $\mathrm{B} \rightarrow \mathrm{T}$ ). In case of asymmetric flow and if the valves have the devices for controlling the switching times the operating limits must be reduced.
